

# System.Attribute Class

```
[ILAsm]  
.class public abstract serializable Attribute extends System.Object  
  
[C#]  
public abstract class Attribute
```

## Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- *Version:* 2.0.x.x
- *Attributes:*
  - CLSCompliantAttribute(true)

## Type Attributes:

- AttributeUsageAttribute(AttributeTargets.All, AllowMultiple=false, Inherited=true)

## Summary

Serves as the base class for custom attributes.

## Inherits From: System.Object

## Library: BCL

**Thread Safety:** This type is safe for multithreaded operations.

## Description

All attributes, whether built-in or user-defined, derive directly or indirectly from `System.Attribute`. Attributes inherit certain default behaviors: the attribute might be associated with any target element (see `System.AttributeTargets`); might or might not be inherited by a derived element; and multiple instances might or might not be allowed on the same target element. These behaviors are specified using `System.AttributeUsageAttribute`.

[*Note:* An attribute is an annotation that can be placed on an element of source code and used to store application-specific information at compile time. This information is stored in the metadata and can be accessed either during application execution, through a process known as reflection, or when another tool reads the metadata. Attributes might change the behavior of the application during execution, provide transaction information about an object, or convey organizational information to a designer.]

1  
2 The CLI predefines some attribute types and uses them to control runtime behavior.  
3 Some languages predefine attribute types to represent language features not directly  
4 represented in the Common Language Specification (CLS). User-defined attribute  
5 classes, inheriting from `System.Attribute`, can also be created. The definition of such a  
6 class includes the name of the attribute, its default behavior, and the information to be  
7 stored.

## 8 **Example**

10 The following example creates and assigns multiple custom attributes to a class. The  
11 attribute contains the name of the programmer and the version number of the class.

12  
13 [C#]

```
14 using System;
15
16 [AttributeUsage(AttributeTargets.Class |
17                 AttributeTargets.Struct,
18                 AllowMultiple=true)]
19 public class Author: Attribute
20 {
21     string authorName;
22     public double verSion;
23
24     public Author(string name)
25     {
26         authorName = name;
27         verSion = 1.0;
28     }
29
30     public string getName()
31     {
32         return authorName;
33     }
34 }
35
36 [Author("Some Author")]
37 class FirstClass
38 {
39     /*...*/
40 }
41
42 class SecondClass // no Author attribute
43 {
44     /*...*/
45 }
46
47 [Author("Some Author"),
48     Author("Some Other Author", verSion=1.1)]
49 class ThirdClass
50 {
51     /*...*/
52 }
```

```

1
2 class AuthorInfo
3 {
4     public static void Main()
5     {
6         PrintAuthorInfo(typeof(FirstClass));
7         PrintAuthorInfo(typeof(SecondClass));
8         PrintAuthorInfo(typeof(ThirdClass));
9     }
10    public static void PrintAuthorInfo(Type type)
11    {
12        Console.WriteLine("Author information for {0}",
13                           type);
14        Attribute[] attributeArray =
15            Attribute.GetCustomAttributes(type);
16        foreach(Attribute attrib in attributeArray)
17        {
18            if (attrib is Author)
19            {
20                Author author = (Author)attrib;
21                Console.WriteLine("    {0}, version {1:f}",
22                                author.getName(),
23                                author.verSion);
24            }
25        }
26        Console.WriteLine();
27    }
28 }
29

```

30 The output is

```

31
32 Author information for FirstClass
33
34
35 Some Author, version 1.00
36
37
38 Author information for SecondClass
39
40
41 Author information for ThirdClass
42
43
44 Some Author, version 1.00
45
46
47 Some Other Author, version 1.10
48

```

49

# 1   Attribute() Constructor

```
2   [ILAsm]  
3   family rtspecialname specialname instance void .ctor()  
  
4   [C#]  
5   protected Attribute()
```

## 6   Summary

7       Constructs a new instance of the System.Attribute class.

8

# Attribute.Equals(System.Object) Method

```
[ILAsm]  
.method public hidebysig virtual bool Equals(object obj)  
  
[C#]  
public override bool Equals(object obj)
```

## Summary

Determines whether the current instance and the specified `System.Object` represent the same type and value.

## Parameters

Parameter	Description
<i>obj</i>	The <code>System.Object</code> to compare to the current instance.

## Return Value

A `System.Boolean` where `true` indicates *obj* represents the same type and value as the current instance. If *obj* is a null reference or is not an instance of `System.Attribute`, returns `false`.

## Description

[*Note:* This method overrides `System.Object.Equals`.

]

**The following member must be implemented if the RuntimeInfrastructure library is present in the implementation.**

## Attribute.GetCustomAttribute(System.Reflection.Assembly, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute
GetCustomAttribute(class System.Reflection.Assembly element, class
System.Type attributeType)

[C#]
public static Attribute GetCustomAttribute(Assembly element, Type
attributeType)
```

### Summary

Returns an instance of a specified custom attribute if a single instance of the attribute is in the metadata for the specified assembly.

### Parameters

Parameter	Description
<i>element</i>	A System.Reflection.Assembly instance.
<i>attributeType</i>	The System.Type of the custom attribute for which to check.

### Return Value

The single instance of System.Attribute of type *attributeType* that is applied to *element*. Returns null if the specified attribute was not found.

### Description

[Note: If multiple instances of *attributeType* can be applied to *element*, use System.Attribute.GetCustomAttributes.]

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not a type derived from <code>System.Attribute</code> .
<b>System.Reflection.AmbiguousMatchException</b>	More than one instance of the specified custom attribute was found.

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttribute(System.Reflection.Module, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute
GetCustomAttribute(class System.Reflection.Module element, class
System.Type attributeType)

[C#]
public static Attribute GetCustomAttribute(Module element, Type
attributeType)
```

### Summary

Returns an instance of a specified custom attribute if a single instance of the attribute is in the metadata for the specified module.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.Module</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

The single instance of `System.Attribute` of type *attributeType* that is applied to *element*. Returns `null` if the specified attribute was not found.

### Description

[Note: If multiple instances of *attributeType* can be applied to *element*, use `System.Attribute.GetCustomAttributes.`]

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not a type derived from <code>System.Attribute</code> .
<b>System.Reflection.AmbiguousMatchException</b>	More than one instance of the specified custom attribute was found.

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttribute(System.Reflection.ParameterInfo, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute
GetCustomAttribute(class System.Reflection.ParameterInfo element, class
System.Type attributeType)

[C#]
public static Attribute GetCustomAttribute(ParameterInfo element, Type
attributeType)
```

### Summary

Returns an instance of a specified custom attribute if a single instance of the attribute is in the metadata for the specified parameter.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.ParameterInfo</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

The single instance of `System.Attribute` of type *attributeType* that is applied to *element*. Returns `null` if the specified attribute was not found.

### Description

[Note: If multiple instances of *attributeType* can be applied to *element*, use `System.Attribute.GetCustomAttributes.`]

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not a type derived from <code>System.Attribute</code> .
<b>System.Reflection.AmbiguousMatchException</b>	More than one instance of the specified custom attribute was found.

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttribute(System.Reflection.MemberInfo, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute
GetCustomAttribute(class System.Reflection.MemberInfo element, class
System.Type attributeType)

[C#]
public static Attribute GetCustomAttribute(MemberInfo element, Type
attributeType)
```

### Summary

Returns an instance of a specified custom attribute if a single instance of the attribute is in the metadata for the specified member.

### Parameters

Parameter	Description
<i>element</i>	An instance of a type derived from <code>System.Reflection.MemberInfo</code> that describes a type member.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

The single instance of `System.Attribute` of type *attributeType* that is applied to *element*. Returns `null` if the specified attribute was not found.

### Description

[Note: If multiple instances of *attributeType* can be applied to *element*, use `System.Attribute.GetCustomAttributes.`]

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not a type derived from <code>System.Attribute</code> .
<b>System.NotSupportedException</b>	<i>element</i> does not represent a constructor, method, property, event, type, or field member.
<b>System.Reflection.AmbiguousMatchException</b>	More than one instance of the specified custom attribute was found.

1  
2  
3

**The following member must be implemented if the RuntimeInfrastructure library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.Assembly) Method

```
[ILAsm]  
.method public hidebysig static class System.Attribute[]  
GetCustomAttributes(class System.Reflection.Assembly element)  
  
[C#]  
public static Attribute[] GetCustomAttributes(Assembly element)
```

### Summary

Returns an array of all custom attributes in the metadata for the specified assembly.

### Parameters

Parameter	Description
<i>element</i>	A System.Reflection.Assembly instance.

### Return Value

A System.Attribute array containing all custom attributes that are applied to *element*. The array includes any inherited custom attributes. Returns an empty array if no custom attributes were found in the metadata for *element*.

### Exceptions

Exception	Condition
System.ArgumentNullException	<i>element</i> is null.

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.Module) Method

```
[ILAsm]  
.method public hidebysig static class System.Attribute[]  
GetCustomAttributes(class System.Reflection.Module element)  
  
[C#]  
public static Attribute[] GetCustomAttributes(Module element)
```

### Summary

Returns an array of all custom attributes in the metadata for the specified module.

### Parameters

Parameter	Description
<i>element</i>	A System.Reflection.Module instance.

### Return Value

A System.Attribute array containing all custom attributes that are applied to *element*. The array includes any inherited custom attributes. Returns an empty array if no custom attributes were found in the metadata for *element*.

### Exceptions

Exception	Condition
System.ArgumentNullException	<i>element</i> is null.

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.ParameterInfo) Method

```
[ILAsm]  
.method public hidebysig static class System.Attribute[]  
GetCustomAttributes(class System.Reflection.ParameterInfo element)  
  
[C#]  
public static Attribute[] GetCustomAttributes(ParameterInfo element)
```

### Summary

Returns an array of all custom attributes in the metadata for the specified parameter.

### Parameters

Parameter	Description
<i>element</i>	A System.Reflection.ParameterInfo instance.

### Return Value

A System.Attribute array containing all custom attributes that are applied to *element*. The array includes any inherited custom attributes. Returns an empty array if no custom attributes were found in the metadata for *element*.

### Exceptions

Exception	Condition
System.ArgumentNullException	<i>element</i> is null.

**The following member must be implemented if the RuntimeInfrastructure library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.Assembly, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute[]
GetCustomAttributes(class System.Reflection.Assembly element, class
System.Type attributeType)

[C#]
public static Attribute[] GetCustomAttributes(Assembly element, Type
attributeType)
```

### Summary

Returns an array of the instances of a specified custom attribute if the attribute is in the metadata for the specified assembly.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.Assembly</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

An array of type *attributeType* containing the instances that are applied to *element*. The array includes any inherited instances of *attributeType*. Returns an empty array if the specified attribute was not found.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>type</i> is null.

**System.ArgumentException**

*attributeType* is not a type derived from  
System.Attribute.

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.Module, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute[]
GetCustomAttributes(class System.Reflection.Module element, class
System.Type attributeType)

[C#]
public static Attribute[] GetCustomAttributes(Module element, Type
attributeType)
```

### Summary

Returns an array of the instances of a specified custom attribute if the attribute is in the metadata for the specified module.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.Module</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

An array of type *attributeType* containing the instances that are applied to *element*. The array includes any inherited instances of *attributeType*. Returns an empty array if the specified attribute was not found.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>type</i> is null.

**System.ArgumentException**

*attributeType* is not a type derived from  
System.Attribute.

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.ParameterInfo, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute[]
GetCustomAttributes(class System.Reflection.ParameterInfo element, class
System.Type attributeType)

[C#]
public static Attribute[] GetCustomAttributes(ParameterInfo element, Type
attributeType)
```

### Summary

Returns an array of the instances of a specified custom attribute if the attribute is in the metadata for the specified parameter.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.ParameterInfo</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

An array of type *attributeType* containing the instances that are applied to *element*. The array includes any inherited instances of *attributeType*. Returns an empty array if the specified attribute was not found.

### Description

If *element* represents a method parameter, the array returned by `System.Attribute.GetCustomAttributes` includes any *attributeType* instances for the parameter *element* in the base methods.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not a type derived from <i>System.Attribute</i> .

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.MemberInfo) Method

```
[ILAsm]  
.method public hidebysig static class System.Attribute[]  
GetCustomAttributes(class System.Reflection.MemberInfo element)  
  
[C#]  
public static Attribute[] GetCustomAttributes(MemberInfo element)
```

### Summary

Returns an array of all custom attributes in the metadata for the specified member.

### Parameters

Parameter	Description
<i>element</i>	An instance of a type derived from <code>System.Reflection.MemberInfo</code> that describes a type member.

### Return Value

A `System.Attribute` array containing all custom attributes that are applied to *element*. The array includes custom attributes that are inherited by *element*, if any. Returns an empty array if no custom attributes were found in the metadata for *element*.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> is null.
<b>System.NotSupportedException</b>	<i>element</i> does not represent a constructor, method, property, event, type, or field member.

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.GetCustomAttributes(System.Reflection.MemberInfo, System.Type) Method

```
[ILAsm]
.method public hidebysig static class System.Attribute[]
GetCustomAttributes(class System.Reflection.MemberInfo element, class
System.Type type)

[C#]
public static Attribute[] GetCustomAttributes(MemberInfo element, Type
type)
```

### Summary

Returns an array of the instances of a specified custom attribute if the attribute is in the metadata for the specified member.

### Parameters

Parameter	Description
<i>element</i>	An instance of a type derived from <code>System.Reflection.MemberInfo</code> that describes a type member.
<i>type</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

An array of type *type* containing the instances that are applied to *element*. The array includes instances of *type* that are inherited by *element*, if any. Returns an empty array if the specified attribute was not found.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>type</i> is null.

<b>System.ArgumentException</b>	<i>type</i> is not a type derived from <code>System.Attribute</code> .
<b>System.NotSupportedException</b>	<i>element</i> does not represent a constructor, method, property, event, type, or field member.

1  
2  
3

## Attribute.GetHashCode() Method

```
[ILAsm]  
.method public hidebysig virtual int32 GetHashCode()  
  
[C#]  
public override int GetHashCode()
```

### Summary

Generates a hash code for the current instance.

### Return Value

A `System.Int32` containing the hash code for the current instance.

### Description

The algorithm used to generate the hash code is unspecified.

[*Note:* This method overrides `System.Object.GetHashCode.`]

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.IsDefined(System.Reflection.MemberInfo, System.Type) Method

```
[ILAsm]  
.method public hidebysig static bool IsDefined(class  
System.Reflection.MemberInfo element, class System.Type attributeType)  
  
[C#]  
public static bool IsDefined(MemberInfo element, Type attributeType)
```

### Summary

Returns a `System.Boolean` value indicating whether a specified custom attribute is present in the metadata for the specified member.

### Parameters

Parameter	Description
<i>element</i>	An instance of a type derived from <code>System.Reflection.MemberInfo</code> that describes a type member.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

`true` if a custom attribute of type *attributeType* is applied to *element* either directly or through inheritance; otherwise, `false`.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is <code>null</code> .
<b>System.ArgumentException</b>	<i>attributeType</i> is not derived from <code>System.Attribute</code> .

<b>System.NotSupportedException</b>	<i>element</i> is not a constructor, method, property, event, type, or field.
-------------------------------------	---

1  
2  
3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.IsDefined(System.Reflection.ParameterInfo, System.Type) Method

```
[ILAsm]  
.method public hidebysig static bool IsDefined(class  
System.Reflection.ParameterInfo element, class System.Type attributeType)  
  
[C#]  
public static bool IsDefined(ParameterInfo element, Type attributeType)
```

### Summary

Returns a `System.Boolean` value indicating whether a specified custom attribute is present in the metadata for the specified parameter.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.ParameterInfo</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

`true` if a custom attribute of type *attributeType* is applied to *element* either directly or through inheritance; otherwise, `false`.

### Exceptions

Exception	Condition
<code>System.ArgumentNullException</code>	<i>element</i> or <i>attributeType</i> is <code>null</code> .
<code>System.ArgumentException</code>	<i>attributeType</i> is not derived from <code>System.Attribute</code> .

- 1
- 2
- 3

**The following member must be implemented if the Reflection library is present in the implementation.**

## Attribute.IsDefined(System.Reflection.Module, System.Type) Method

```
[ILAsm]  
.method public hidebysig static bool IsDefined(class  
System.Reflection.Module element, class System.Type attributeType)  
  
[C#]  
public static bool IsDefined(Module element, Type attributeType)
```

### Summary

Returns a `System.Boolean` value indicating whether a specified custom attribute is present in the metadata for the specified module.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.Module</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

`true` if a custom attribute of type *attributeType* is applied to *element*; otherwise, `false`.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not derived from <code>System.Attribute</code> .

**The following member must be implemented if the RuntimeInfrastructure library is present in the implementation.**

## Attribute.IsDefined(System.Reflection.Assembly, System.Type) Method

```
[ILAsm]  
.method public hidebysig static bool IsDefined(class  
System.Reflection.Assembly element, class System.Type attributeType)  
  
[C#]  
public static bool IsDefined(Assembly element, Type attributeType)
```

### Summary

Returns a `System.Boolean` value indicating whether a specified custom attribute is present in the metadata for the specified assembly.

### Parameters

Parameter	Description
<i>element</i>	A <code>System.Reflection.Assembly</code> instance.
<i>attributeType</i>	The <code>System.Type</code> of the custom attribute for which to check.

### Return Value

`true` if a custom attribute of type *attributeType* is applied to *element*; otherwise, `false`.

### Exceptions

Exception	Condition
<b>System.ArgumentNullException</b>	<i>element</i> or <i>attributeType</i> is null.
<b>System.ArgumentException</b>	<i>attributeType</i> is not derived from <code>System.Attribute</code> .
