

# System.RankException Class

```
[ILAsm]
.class public serializable RankException extends System.SystemException

[C#]
public class RankException: SystemException
```

## Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- *Version:* 2.0.x.x
- *Attributes:*
  - CLSCompliantAttribute(true)

## Summary

Represents the error that occurs when an array with an incorrect number of dimensions is passed to a method.

## Inherits From: System.SystemException

**Library:** BCL

**Thread Safety:** All public static members of this type are safe for multithreaded operations. No instance members are guaranteed to be thread safe.

## Example

The following example demonstrates an error that causes a System.RankException exception.

```
[C#]

using System;
public class RankExample {
    public static void Main() {
        int[] oneDAry = new int[5];
        int[,] twoDAry = new int[2,3];
        for (int i = 0; i < 2; i++ ) {
            oneDAry.SetValue( i, i );
        }
        try {
            Array.Copy( oneDAry, twoDAry, 2);
        }
        catch ( RankException e ) {
```

```

1         Console.WriteLine( "Error caught: {0}", e );
2     }
3 }
4 }
5
6 The output is
7
8 Error caught: System.RankException: The specified arrays must have the same
9 number of dimensions.
10     at System.Array.Copy(Array sourceArray, Int32 sourceIndex, Array
11 destinationArray, Int32 destinationIndex, Int32 length)
12     at System.Array.Copy(Array sourceArray, Array destinationArray, Int32
13 length)
14     at RankExample.Main()
15
16

```

# RankException() Constructor

```
[ILAsm]  
public rtspecialname specialname instance void .ctor()  
  
[C#]  
public RankException()
```

## Summary

Constructs and initializes a new instance of the `System.RankException` class.

## Description

This constructor initializes the `System.RankException.Message` property of the new instance to a system-supplied message that describes the error, such as "The two arrays must have the same number of dimensions." This message takes into account the current system culture.

The `System.RankException.InnerException` property is initialized to `null`.

# RankException(System.String) Constructor

```
[ILAsm]  
public rtspecialname specialname instance void .ctor(string message)  
  
[C#]  
public RankException(string message)
```

## Summary

Constructs and initializes a new instance of the `System.RankException` class.

## Parameters

Parameter	Description
<i>message</i>	A <code>System.String</code> that describes the error. The content of <i>message</i> is intended to be understood by humans. The caller of this constructor is required to ensure that this string has been localized for the current system culture.

## Description

This constructor initializes the `System.RankException.Message` property of the new instance using *message*. If *message* is null, the `System.RankException.Message` property is initialized to the system-supplied message provided by the constructor that takes no arguments. The `System.RankException.InnerException` property is initialized to null.

# RankException(System.String, System.Exception) Constructor

```
[ILAsm]
public rtspecialname specialname instance void .ctor(string message, class
System.Exception innerException)

[C#]
public RankException(string message, Exception innerException)
```

## Summary

Constructs and initializes a new instance of the `System.RankException` class.

## Parameters

Parameter	Description
<i>message</i>	A <code>System.String</code> that describes the error. The content of <i>message</i> is intended to be understood by humans. The caller of this constructor is required to ensure that this string has been localized for the current system culture.
<i>innerException</i>	An instance of <code>System.Exception</code> that is the cause of the current <code>Exception</code> . If <i>innerException</i> is non-null, then the current <code>Exception</code> was raised in a catch block handling <i>innerException</i> .

## Description

This constructor initializes the `System.RankException.Message` property of the new instance using *message*, and the `System.RankException.InnerException` property using *innerException*. If *message* is null, the `System.RankException.Message` property is initialized to the system-supplied message provided by the constructor that takes no arguments.

[*Note:* For information on inner exceptions, see `System.Exception.InnerException`.]
